1. Import API functionality

1.1. Overview

The Calculator ImportAPI functionality allows a calculation to be prepopulated from data held in a client's CRM system. The client then navigates through the prepopulated calculation. When the calculation results page is reached, the system is able to transmit the results back to the client's CRM system, with a link to a PDF with comprehensive details of the calculation.

The Import API functionality uses ASP.NET Web API 2 to handle JSON data posted to an endpoint on the entitledto Web Application. This creates a calculation with the details posted to the server and returns JSON populated with a unique CalcIdent which is used to open the pre-populated calculation in a web browser.

When a calculation is completed a summary of the calculation can be posted as JSON to a webservice residing on the client's server. The JSON contains the URL of a pdf with details of the client's calculation results that can be pulled from the entitledto server.

Definitions of the classes used and a test harness are included in this document, these are written in Microsoft C# in order to aid integration effort. It does not force development down this route. JSON (JavaScript Object Notation) is an open standard file format, and data interchange format, that uses human-readable text to store and transmit data objects consisting of attribute–value pairs and array data types. It does not predefine the programming development language used, just the format of the data being exchanged.

1.2. Creating a new calculation

The data used to prepopulate the calculation is posted to an endpoint on the entitledto Web Application in the form:

https://e2test1.stagingentitledto.co.uk/api/2/ImportAPI
where e2test1.stagingentitledto.co.uk is replaced by the client's site url

The response returned is formatted as JSON. The element used in the BenefitCheckModel is:

```
household.CalcIdent
```

This contains a Guid which in used to uniquely identify the calculation. An example of the format of a CalcIdent GUID is:

6fd9fd4e-f65f-4580-ae16-8a46c7fc517f

The CalcIdent returned is used to generate a URL to open the pre-populated calculation

https://e2test1.stagingentitledto.co.uk/Intro/Home?cid=abaec4d1-b417-4f27-a0e9-d7eaf5b014a3
where e2test1.stagingentitledto.co.uk is replaced by the client's site url
and abaec4d1-b417-4f27-a0e9-d7eaf5b014a3 is replaced by the GUID returned in the household.CalcIdent element

The JSON data is required to adhere to the format detailed in "Appendix 1 – BenefitCheckModel". An example JSON file used to create a calculation is detailed in "Appendix 2 – Sample JSON posted to create new calculation"

Section 2 “Calculator Pages – API Mapping” provides screenshots of the mapping of fields in the calculator to the elements in the BenefitCheckModel

1.3. Returning calculation details to client’s CRM server

When the user navigates through the calculator to the results page the application checks the data posted to prepopulate the calculation for a web service name defined in the JSON data initially posted in the element:

```
Household.ResultsServiceUrl
```

The entitledto web application posts JSON data in the form described in “Appendix 2 – JSON returned when calculation completed” to this endpoint. The data details the calculation benefit entitlements, any passported benefits and a URL to a pdf which details the benefits calculation which can be pulled from the entitledto server.

Your household

Do you have a partner who normally lives with you?

Say yes if you are married or live with someone as a couple, including civil partners or people you live with as if you are civil partners.

○ Yes ◉ No

household.PartnerResiding

How many children are in your household?

Include any children under 16, and any children aged 16 to 19 years old who you still get Child Benefit for, unless you are claiming Universal Credit and have a 19 year old, in which case please read the help text for this question before answering. If you share custody, you should only include children if you receive Child Benefit for them. If you are pregnant or adopting and include the expected child we will calculate your benefits assuming the child is born/adopted. Do not include an expected child if you want to find out your current entitlements.

2

household.ChildrenCount

Does anyone else live in your home?

For instance, a grown up child, elderly parent, joint tenant, sub-tenant or lodger.

◉ Yes ○ No

How many other adults live with you?

household.DependantCount

Are you a British or Irish citizen living in the UK?

○ Yes ◉ No

household.BritishIrishCitizen

If you are not a British or Irish national you may not be entitled to benefits in the UK, but please see our advice pages on benefits if you are not a British or Irish national. If you read these advice pages and decide that you are fully entitled to benefits, e.g. because you are an EEA 'worker' or you have a 'permanent right to reside', then proceed through the calculator as if you were a British or Irish national.

Are you affected by coronavirus?

If someone in your household is affected by coronavirus let us know how and we will display appropriate information for you.

◉ No ○ Yes - ill or caring for someone

○ Yes - not ill but income has changed

Are you in hospital/residential care, a prisoner, on strike, living abroad or a full-time student?

○ Yes ◉ No

2.11. Savings

Save your calculation

If you'd like to save your calculation create an account today.

Save calculation & create account

Savings

If you (and your partner) have TOTAL capital of £6,000 or less you do not need to enter your capital - the first £6,000 of your capital is ignored.

If you have total capital over £6,000 please enter the amount you have in each category, without taking off the amount ignored by the government. The calculator then works out your total capital and the weekly income the government assumes you get on this capital when assessing your benefit entitlement (this is shown by the box 'Assumed weekly income from capital').

Please note: If you are self-employed and have money set aside in a savings account to cover your tax liability this does not need to be included below. The government has said this money can be considered a business asset rather than savings.

For information on which assets are not included as capital and the formula used to convert capital into income please see more information on capital over £6,000.
